Experience

BAWAG Group — Vienna, Austria
Marketing Data Scientist & Automation Engineer · Contract · Part-time — *Sep 2024 - present*

- Designed causal graphs with stakeholders and developed custom Bayesian Marketing Mix Models in PyMC to estimate channel contributions across multiple banking brands.
- Translated model insights into actionable budget allocations across two planning cycles, shifting spend from upper-funnel media toward paid social and retargeting, which lead to subsequent sales increases by 15%.
- Performed unsupervised topic modeling on 100k+ internal emails and identified automation opportunities.
- Led a cross-functional automation project, designing and deploying a custom front- and backend solution.

Python · SQL · PyMC · Git · Airflow · PowerBI · Jenkins

Medical University Vienna — Vienna, Austria
Research Assistant Medical Data Science · Volunteering · Part-time — *May 2024 - Nov 2025*

- Co-authored 2 peer-reviewed journal papers on medical AI applications.
- Developed a secure web app which enabled external institutions to batch-predict outcomes for 10k+ patients without model access.
- Released a PyPI package for deep-learning-based marker extraction from SPECT/CT scans, supporting reproducible research.

Python · Git · CUDA · Docker

BAWAG Group — Vienna, Austria
Data Science Intern · Contract · Part-time — *Nov 2023 - Aug 2024*

- Built a banking app notification dashboard used for monitoring engagement KPIs and marketing initiatives across 1M+ app users.
- Performed keyword extraction on unstructured customer survey responses using traditional NLP techniques.
- Implemented and monitored data pipelines in Airflow across all online marketing channels, ensuring reliable daily reporting.

Python · SQL · Git · Airflow · PowerBI · Azure

University of Klagenfurt — Klagenfurt, Austria
Tutor in Econometrics and R Programming · Contract · Part-time — *Oct 2022 - Feb 2023*

- Conducted weekly tutorials for 42 students, demonstrating practical examples with R notebooks complementing the lecture.
- Contributed to improvements in grade average (4.1 to 3.21) and pass rate (78% to 90%) compared to previous year.

R · LaTeX

Education

Vienna University of Technology — Vienna, Austria
M.Sc. Data Science — *Oct 2023 - Dec 2026 (expected)*

- Major: Machine Learning, Minor: Medical Data Science, NLP and Knowledge Graphs
- Current GPA: 1.1/5
- Academic Excellence Scholarship (750€)

University of Klagenfurt — Klagenfurt, Austria
B.Sc. International Business & Economics — *Oct 2020 - Jul 2023*

- GPA: 1.19/5 (graduated with distinction)
- Academic Excellence Scholarship (3 ×750€, 1×1 250€)
- Joint Study Scholarship (worth $22 700)

University of Illinois at Urbana-Champaign — Illinois, USA
Exchange Program — *Jan 2022 - Jun 2022*

- GPA: 3.87/4

Impact of disease-modifying therapy on ^{99m}Tc-DPD SPECT/CT markers in transthyretin cardiac amyloidosis enabled by artificial intelligence. *European Journal of Nuclear Medicine and Molecular Imaging*, 53, 3310–3324. https://doi.org/10.1007/s00259-025-07673-6

2. Spielvogel CP, Kersting D, Haberl D, …, **Köfler M**, …, Nitsche C. (2026). Screening for patients at risk for cardiac amyloidosis via electronic health records: A multicenter machine learning development and validation study. *PLOS Digital Health*, 5(10), e0001637. https://doi.org/10.1371/journal.pdig.0001637

Selected Projects

Discovering Globally Aligned Representations with Causal Curiosity-Guided Exploration (Thesis) | Python · JAX — In progress

- Developed Saturated Sequential Residualization, a novel exploration-based algorithm for discovering causal representations, addressing the branch-dependent inconsistencies of recursive Causal Curiosity.
- Formalized hierarchical permutations, investigating their implications for hypothesis complexity and compositional generalization.
- Designed experiments in MuJoCo, benchmarking causal factor discovery and downstream reinforcement learning on unseen combinations of environmental factors.

Latent Causal Dynamics for Model-Based Reinforcement Learning | Python · PyTorch — Sep 2025

- Implemented code for the publication Latent Causal Dynamics Model for MBRL from scratch.
- Reproduced benchmarks comparing the proposed algorithm to model-free alternatives.

Certificates

Coursera: IBM Databases (SQL and Python) · Google Professional Data Analytics · The Nuts and Bolts of Machine Learning
DataCamp: Building Pipelines with Docker · Intermediate SQL · Introduction to R
